

## CLAIMS

1. Motor vehicle (1) with a roof (2) that has at least one part (3) which can be moved as a whole between an open position and a closed position and which, in the closed position, extends between the area near a windshield frame (4) and a rear, especially rigid, roof part (5), characterized by the fact that the rear roof part (5) comprises two lateral tips (7) or, as they are also known, fins, which, when the roof (2) is closed, are overlapped on their upper side by frame parts (31), which can be moved upward to create an opening for the passage of the movable roof part (3).

2. Motor vehicle in accordance with Claim 1, characterized by the fact that the frame parts (31) can be swung open about a rear axis (33) and swung closed again over the opened roof part (3).

3. Motor vehicle in accordance with Claim 1 or Claim 2, characterized by the fact that a transverse frame part (32), which overlaps a rear window (6) situated between the fins (7), can also be swung open and closed along with the lateral frame parts (31) of the rear roof part (5).

4. Motor vehicle in accordance with any of Claims 1 to 3, characterized by the fact that the overlapping frame parts (31; 32) of the rear roof part (5) are made of a light construction material.

5. Motor vehicle in accordance with any of Claims 1 to 4, characterized by the fact that the rotation of the frame parts (31; 32) can be effected by a remotely controlled drive (26).

6. Motor vehicle in accordance with Claim 5, characterized by the fact that the drive (26) is connected with the opening movement of the front outer sections (16) by program control.

7. Motor vehicle in accordance with any of Claims 1 to 6, characterized by the fact that the movable roof part (3) is divided into several connected sections (15; 16) in such a way that it can be varied between a normal width and a narrowed width by displacement of sections (16), and, when it is in its state of narrowed width, it can be moved between its open position and its closed position.

8. Motor vehicle in accordance with Claim 7, characterized by the fact that the movable roof part (3) is divided into a middle section (15) with respect to a vertical longitudinal center plane (E) and two outer sections (16), which can be swung inward towards the middle section (15) to adjust to the narrowed

position.

9. Motor vehicle in accordance with any of Claims 1 to 8, characterized by the fact that the movable roof part (3) can be lowered in an essentially horizontal open position above a rear-end, essentially horizontal region of the automobile body, especially a trunk lid.

10. Motor vehicle in accordance with any of Claims 1 to 9, characterized by the fact that the front roof part (3) is supported on a linkage (23) in such a way that it can be independently moved and that it can be moved by the linkage (23) between the open position and the closed position.

11. Motor vehicle in accordance with Claim 10, characterized by the fact that the linkage (23) is supported within the lateral tips (7) of the rear roof part (5) and overlapped by the lateral frame parts (31) when the roof (2) is closed.
